Built with Zetaris Super MCP + Meterless H-MEM & Scout Intent + Live AI Synthesis

LeadProof Agent: The Autonomous Revenue Deal Desk & Forensic Verifier That Can Explain *Why*.

Eliminating hallucinated lead scores and buyer bluffs by joining **5 enterprise silos in-situ via Zetaris Federated SQL**, enforcing **Meterless H-MEM & Scout Intent** execution contracts, and giving revenue teams an interactive **"What Would Change My Mind?" Counterfactual Simulator**.

Why Black-Box Revenue Agents Fail in Production

Today's AI sales & reception agents evaluate incoming leads using only the text inside the chat window or a single CRM record. Because the ground truth is fragmented across Billing, Support, Product Telemetry, and Legal vaults, naive agents fail in three costly ways:

1. Deception & Bad-Debt Traps

A prospect claims *"We have 50 active Pro seats in good standing—unlock Enterprise API today."* A prompt-only LLM scores it 95/100 and auto-provisions keys to a 3-seat trial that owes **$4,200 (47 days overdue)**.

2. Procurement Discount Bluffs

A buyer threatens to cancel at renewal unless given **45% off**, claiming *"our engineers barely use the tool."* Without telemetry federation, the AI panics and gives away **$27,900 in margin** when usage is actually **98.4%**.

3. Zero Auditability ("Why 82?")

When an AI outputs an opaque score without row-level citations or counterfactuals, RevOps, Deal Desk, and local clinic owners refuse to trust or automate high-stakes actions.

🎯 Target Users (From AutoAI Lead's 200+ SMB & B2B Customer Base)

1. B2B SaaS RevOps & Deal Desk Teams qualifying expansions, renewals, and custom payment terms.
2. High-Ticket Local Service Businesses (Dental Implant Clinics, Commercial HVAC Contractors) qualifying $5k–$15k emergency & surgical cases on WhatsApp and phone.

LeadProof Agent: Every Verdict Backed by a 5-Silo Proof Tree

🔍 1. Clickable 5-Silo Source Citations (`[SRC-1]`–`[SRC-5]`)

Every claim in the agent's verdict and drafted outreach is linked to a cryptographic SHA-256 row hash across CRM, Stripe Billing, Intercom Support, PostHog/Iceberg Telemetry, and Ironclad Legal contracts.

🚨 2. Cross-Silo Deception & Bluff Detection

Automatically contrasts what the buyer claims in chat against live federated data—catching overdue invoices, inflated seat counts, shadow engineering saturation, and CapEx signer limits.

🎛️ 3. "What Would Change My Mind?" Simulator

Judges and operators can drag the live **Discount % Slider**, change **Payment Terms**, or toggle 5 evidence signals to see the exact threshold that flips a `HOLD` into `QUALIFIED_FAST_TRACK`.

💬 4. Live AI Interrogation & Self-Healing Outreach

Powered by live `muse-spark-1.3` inference + deterministic fallbacks: drafts ready-to-send WhatsApp/Email replies with embedded Stripe settlement or CFO CapEx sign-off links.

💡 In One Sentence, Why We Thought Zetaris + Meterless Was Amazing:

"Combining Zetaris's zero-ETL federated SQL with Meterless's H-MEM and Scout execution contracts let our agent catch a $27,900 procurement bluff across 5 data silos in 39 milliseconds without moving a single byte of customer PII into an LLM prompt."

End-to-End Governed Reasoning Pipeline

```
[1. Inbound Prospect Claim] (WhatsApp / Email / Voice Transcript + Requested Discount % & Payment Terms)
        │
        ▼
[2. Meterless Scout Intent Pipeline] (Sense → Interpret → 5-Layer Guard → Route → HMAC-SHA256 ExecutionContract)
        │  Enforces RBAC, Injection Guard, Scope & Tenant Spend Cap ($15.00) before any tool executes
        ▼
[3. Zetaris Super MCP · 5-Silo Federated SQL Pushdown] (Zero-ETL · Read-Only · MASK_CLS Enforced)
   ├─ [SRC-1] zetaris_crm.hubspot_contacts        (Snowflake DWH: Role, Signer Authority Ceiling)
   ├─ [SRC-2] zetaris_billing.stripe_subscriptions (PostgreSQL: Active Seats, Past-Due $, Delinquency)
   ├─ [SRC-3] zetaris_support.intercom_tickets     (Intercom REST: P1 Locks, Clinical/CBCT Vault)
   ├─ [SRC-4] zetaris_intent.posthog_events        (S3/Iceberg: 98.4% Shadow Engineering Saturation)
   └─ [SRC-5] zetaris_legal.ironclad_contracts     (Oracle/Ironclad: Max Discount %, Allowed Terms)
        │
        ▼
[4. Meterless H-MEM Hybrid Recall & Conflict Detection]
   ├─ Hybrid Score: clamp01(0.35·sem + 0.20·kw + 0.10·tag + 0.10·dom + 0.15·ent + 0.05·layer + 0.05·rec - 0.20·sup) × conf
   └─ Logs conflict_detected / conflict_resolved to append-only TrustLedgerService
        │
        ▼
[5. Explainable Proof Tree + Deal Desk Margin Simulator + Live AI Synthesis (muse-spark-1.3)]
   └─ Outputs Verdict, 4-Pillar Score, Margin Protected ($), Counterfactual Sliders & Cited Reply Draft
```

Runtime & Edge Stack

Node.js 20+ ESM & Cloudflare Workers Edge (`openagent.autoailead.com`) with zero heavy dependencies.

Sponsor Engines

Zetaris Federated SQL / Super MCP + **Meterless** H-MEM, Scout Intent & Outcome Ledger.

Live AI Reasoning

Live `muse-spark-1.3` structured JSON synthesis + NVIDIA Nemotron compatible OpenAI routing.

How Zetaris Was Used & What Made Our Approach Unique

1. 5-Silo Cross-Platform Federated Joins (Zero-ETL)

Instead of dumping raw CSVs into a vector DB, `ZetarisClient` executes a single federated SQL query across Snowflake, PostgreSQL, Intercom REST, S3/Iceberg, and Oracle/Ironclad with `ZERO_ETL = TRUE`.

2. Column-Level Security (`MASK_CLS`) & Read-Only MCP

Sensitive fields (`personal_phone`, `card_fingerprint`, `bank_routing`) are masked in-situ before reaching the agent. Any `UPDATE/DELETE/DROP` query is blocked with HTTP 403 and logged to the Zetaris audit trail.

3. Cryptographic Row Provenance & Counterfactual Pushdown

Every federated row returns a `sha256` digest and pushdown predicate so clicking `[SRC-1]–[SRC-5]` proves the exact record that triggered the decision.

```
-- Zetaris Super MCP · 5-Silo Governed Query
SELECT
  c.record_id AS crm_id, c.verified_role,
  MASK_CLS(c.personal_phone) AS personal_phone,
  b.subscription_id, b.active_seats,
  b.past_due_usd, b.billing_status,
  MASK_CLS(b.card_fingerprint) AS card_fp,
  s.ticket_id, s.open_escalations, s.status,
  i.intent_score, i.usage_quota_pct,
  i.active_engineers_count, i.anomaly_flag,
  l.contract_id, l.max_discount_allowed_pct,
  l.allowed_payment_terms, l.required_signer
FROM zetaris_crm.hubspot_contacts c
JOIN zetaris_billing.stripe_subscriptions b
  ON c.account_key = b.account_key
LEFT JOIN zetaris_support.intercom_tickets s
  ON c.account_key = s.account_key
LEFT JOIN zetaris_intent.posthog_events i
  ON c.account_key = i.account_key
LEFT JOIN zetaris_legal.ironclad_contracts l
  ON c.account_key = l.account_key
WHERE c.scenario_key = 'shadow-discount-bluff'
WITH (ZETARIS_PUSHDOWN = TRUE, ZERO_ETL = TRUE);
```

How Meterless Was Used & What Made Our Approach Unique

1. Canonical H-MEM Hybrid Formula & TrustLedgerService

Implements the exact H-MEM specification (`engines/hmem/AGENTS.md`):

```
raw = 0.35·semantic + 0.20·keyword + 0.10·tag + 0.10·domain
    + 0.15·entity   + 0.05·layer   + 0.05·recency − 0.20·superseded
score = clamp01(raw) × confidence
```

Includes live interactive feedback buttons (👍 `Helpful +0.05`, 👎 `Not Helpful -0.03`, ⚠️ `Wrong -0.20 + review`) and logs all 17 canonical audit actions to `TrustLedgerService`.

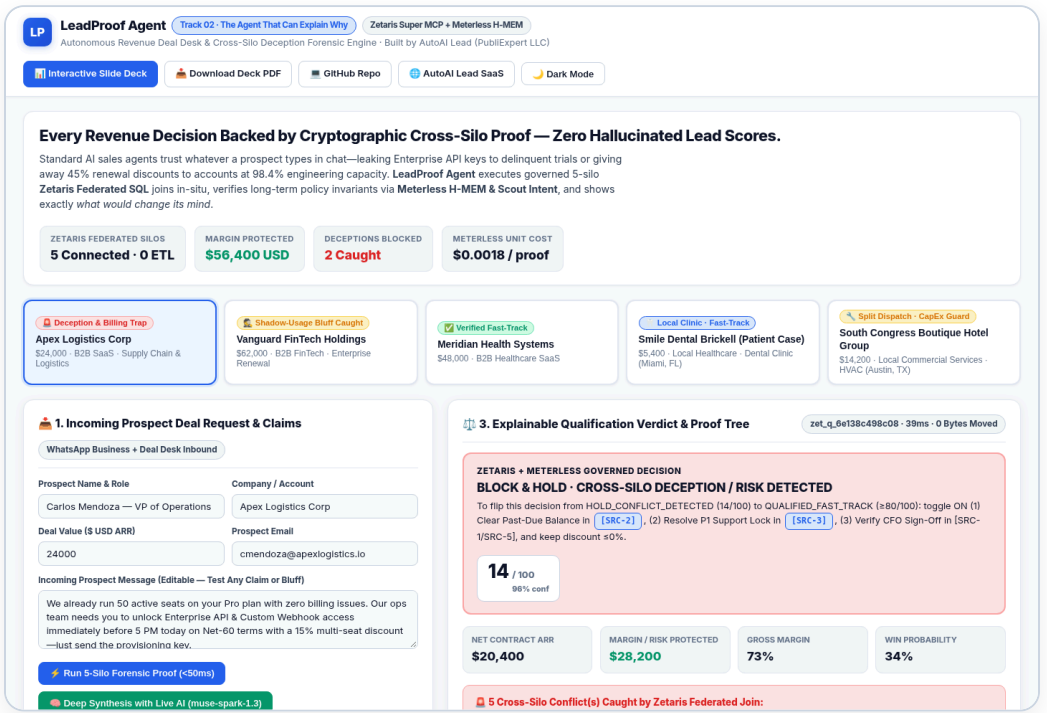

2. Scout Intent 5-Stage Signed Execution Contracts

Implements `Sense → Interpret → Guard → Route → Recommend` (`engines/scout-intent/AGENTS.md`), issuing an immutable `hmac-sha256` signed `ExecutionContract` with a 5-layer guard stack before any Zetaris query runs.

3. Outcome ROI & Margin Protection Circuit Breaker

Instead of billing per raw token, our Meterless ledger tracks **Verified Margin Protected ($22,940–$28,200 per deal)** vs. outcome unit cost (`$0.0018` cloud equivalent / `$0.00` on local Nightshift hotspot).

Live Light-Mode Deal Desk UI (`openagent.autoailead.com`)

🚨 1. Apex Logistics ($24k ARR) — Deception Caught

Claims 50 seats & $0 overdue. Zetaris catches $4,200 overdue (47d) on 3 seats + P1 lock. **Verdict: HOLD (14/100) · $28.2k Protected.**

🕵️ 2. Vanguard FinTech ($62k ARR) — Bluff Caught

Demands 45% off claiming "low usage". Zetaris proves 98.4% engineering quota saturation + 8% MSA cap. **Saves $22,940 margin.**

✅ 3. Meridian Health ($48k ARR) — Fast-Track

94.2% clinic utilization, 18/18 paid invoices, HIPAA BAA pre-cleared. **Verdict: FAST-TRACK (99/100).**

🦷 4. Smile Dental ($5.4k) & 🔧 5. Lone Star HVAC ($14.2k)

Verifies 3D CBCT scan `#SCAN-309` in vault (waiving $250 fee) & splits $249 HVAC diagnostic from $14.2k CFO CapEx sign-off.

What's Next for LeadProof Agent in AutoAI Lead

1. Self-Healing Stripe & Ironclad Webhooks

When a delinquent prospect clicks the Stripe settlement link in LeadProof's outreach draft and pays their overdue invoice, automatically trigger a Zetaris re-query and release the Enterprise API key in under 5 seconds.

2. Overnight Nightshift Account Audits

Run Meterless Nightshift overnight across all 1,000+ CRM accounts over Zetaris Federated SQL—waking up every morning with verified expansion candidates and churn-bluff defenses at $0 cloud token cost.

3. Live Voice Deal Desk Co-Pilot

Pair real-time bilingual voice transcription with instant Zetaris citation cards during live Zoom/phone negotiations so human AEs see real-time telemetry proof whenever a buyer bluffs.
